

California Fertility Partners

Welcome to California Fertility Partners

California Fertility Partners is a medical practice dedicated to the evaluation and treatment of male and female reproductive issues. Our physicians are all fellowship trained in Reproductive Endocrinology and Infertility and have been at the forefront of this highly specialized area of medicine for over twenty-five years. It is our goal to provide comprehensive and compassionate fertility care.

Our Practice

Our new state of the art facility combines clinical offices, laboratory facilities, and a surgical suite in one convenient location. The facility was designed to provide a calm and relaxing environment in which to receive fertility care. The clinical areas include exam rooms equipped with high resolution ultrasound machines adjacent to individual nurse consultation offices. All clinical procedures are performed by the patient's physician. After each exam, patients meet privately with one of our specially trained nurses for instruction and guidance during the treatment process.

Our Treatments

California Fertility Partners offers the full spectrum of fertility treatments including in vitro fertilization (IVF), intracytoplasmic sperm injection (ICSI), egg and sperm donation, gestational surrogacy, pre-implantation genetic diagnosis (PGD), as well as more basic fertility procedures such as intrauterine inseminations (IUI).

Our Physicians

Our physicians are recognized nationally and internationally for their expertise in reproductive medicine. They have each developed loyal patient and physician referrals due to their high success rates and personalized care. Our physicians are experts in the field of reproductive pelvic surgery including the correction of congenital anomalies, hysteroscopic excision of uterine adhesions and tumors, and laparoscopy for treatment of endometriosis and pelvic adhesions.

Our Laboratory

Reproductive Technology Laboratories is our in-house endocrine and andrology clinical laboratory. It offers hormone assays and sperm processing on a daily basis. Our IVF laboratory is credited with initiating some of this country's first test tube babies and the first baby born from a frozen embryo.

Our Patients

New patients begin by scheduling a consultation with one of our physicians. After undergoing a thorough evaluation, each patient is given an individualized treatment plan. If conception does not occur within several treatment cycles, a follow-up appointment is made to review the additional information that has been gained during the monitored cycles, and to outline the next treatment plan.

We realize that addressing and attending to fertility issues can be physically and emotionally draining. At California Fertility Partners, we make every effort to provide the highest quality care in a personalized and supportive manner to help make the journey less stressful and, we believe, more successful. We look forward to helping you achieve your goal of pregnancy.
